

About VRS situation, I have recommend to see all providers to cooperate eachother for using VP without any prevention on who is calling or other, it should be same as the voice phone calls. I will like to see that VRS can be used with the phone company and have them to pay the fair share of cost for using the VP as well as wireless, analog, broadcast and digitil lines because this way we have preference to use the TTY, VP, regular phone or phone with text as Caption Tel or fax machine without any extra cost for the deaf and hard of hearing people. I think that the phone companies will have to share the cost of providing the services as equally as the voice calls or have TRS to pay the cost of providing the service with the VP--which will increase the monthly cost to anyone that has the budget's plan with the phone company. For example in PA we, including hearing or deaf people has to pay 9 cent a month for relay service. With their offer on the wireless service, they shoud offer any service such as VP phone or other such as their offer on wireless phone or pager.
