Washington, DC 20554

RE:WT Docket No. 11-49

Dear Ms. Dortch,

I am writing to you on behalf of A Better Wireless NISP, a small business operating primarily as a WISP offering high speed broadband to many homes and businesses with no other options other than dial-up and very limiting satellite service. We operate in Otter Tail County, Minnesota.

As part of our Internet serving infrastructure, we, among other WISPs throughout the country, operate in the unlicensed 900 MHz band. The challenges for us in this limited space is already great and at many times difficult to work with, but we do it for both our customers and our neighbors. This small 26 MHz block of spectrum account for the primary choice for non-line-of-site links. It is necessary in some parts of our country with heavily wooded areas. There are no alternatives that begin to compare!

With the WISPA Test Report, which I have attached for your convenience, Progeny's services greatly reduce the efficiency of commonly used radios to connect peoples to families and to telecommute for work.

It is my understanding that the FCC required Progeny to perform testing to be sure their system didn't interfere with unlicensed 900 MHz users. As the evidence shows, Progeny provides an unacceptable level of interference.

Sincerely,

Mitch Koep
A Better Wireless, NISP
