

The Amateur Radio Operator Community must be given NON SHARED segment of the 1800MHZ - 2000MHZ.

We provide Emergency service(s) to our Community. Weather, Health, Welfare, and links to Law Enforcement, First Responders, and victims of natural disasters.

It is imperative to ensure that these abilities are not pre-empted by other services. This frequency region is very good during night hours, and can be used portable or fixed. It lends itself to NVIS communications that are very useful in emergency response activities following hurricanes.

I've been active since 1964, and continue to be so.
