Comment: I favor the revision of 97.3(c)(5) and 97.307(f)(8) to allow the utilization of TDMA technologies in experimentation and promoting more efficient use of the radio spectrum available for the amateur radio service. As new technologies have evolved amateur radio operators have always been interested in incorporating the new technologies and working towards better utilization of the radio spectrum.

I am in favor of amending the part 97 Amateur Radio Service rules for extending the grace period during which an expired amateur license may be renewed.

I do not feel that reducing the number of VE examiners required for administering examinations will reduce the security of the examination process.
