

i am highly upset with these wicked devices. cell phones, internet, cable, house phones, especially the bundle packages in which are deceitful, hackers and scammers and their evil schemes. the privacy of our lives being exposed and easy accessible. these companies are not telling the truth about privacy acts especially with the gps systems and the tracers. we should have a say so in the matter before you all go against our rights and are ripping off the consumers and the returned procedures refusing to give us our money back but offers us other deals within the companies that r just as bad. then dealing with foreign policies and bad and rude behavior poor communications. refusing us with the benefits of all money and services given to us. i would of like to be informed about having my info exposed to the world through networking, i want my name, phone numbers and address to be hidden from everyone except for those who i give my info to. especially dealing with abuser from all walks in life sexual offenders noisy people who are either perverts and or predators or just plain bored. i want money back guarantee with all business done in the united states, i chose to also deal with customer services done here in the states and i want to get my money back when not satisfied. plus have a store that we can walk into regarding our complaints, concerns and comments and that we can get our money back
