

This is a HOT button issue in today's electronic commerce and communication. I am gathering info from field studies performed in LA, Ft. Worth, Mena Arkansas, and Houston. I am able to conclusively identify a Criminal Enterprise which deals with illegal immigration, meth "pipelines", counterfeiting debit/credit cards, and invasive technology used to exploit US citizens individually and corporations as well. The group has apparent Islamic ties and target Coffee Shops, fast food restaurants, and stores like Big Lots-where pay pass chips can be read at any register by USB RFID reader phones. This counterfeit group originated in Germany. They are smuggling immigrants from N. AFRICA who are indebted to work for the Enterprise. The funds for these activities are allegedly pooled from George Soros's grants.

With his Aryan descent (Hungarian), and his interest in counter cultural and so called "progressive lifestyles", one could safely assume that Homeless Funding and Marijuana Support groups is also linked to the same group I speak of that produces meth inside of plumbing pipes-leaching from the grounds and foundational cracks for the purpose of FRACKING for meth.

This sewage byproduct is combined with a strain of Cannabis called KUSH from Afghanistan. It is highly addicting and already smells like "smoking crystal meth". Hence, the name of the company is Krystal Enterprises.

Our whole Transportation industry has been infiltrated. A revival of all Cold War Technology and German Naval Fire Control Radar (datafusion) and extraction for high tech signal processing is and has been implemented by fleets of Telemetry data gathering vehicles who are tracking U S Citizens for their assets, feigning their ties to the NSA and DHS...generating propaganda on the net making references to our Presidents having CONNECTIONS to infamous secret societies and causing all of the school shootings with ridiculous claims of mind control experiments.

The main invasive type of radar technology used to exploit cash registers, CCTV cams, and TV audio speakers is Compression Pulse Radar.

Low Frequency Active Sonar, Sodar, and Lidar extends the array beams to enable Call Capture from across the street.

Indian, Hookah, and similar restaurants participate in these activities-schools with computers with financial aid monies exchanging hands with correspondence by email within the school.

SHOPPING CENTERS, strip centers, and entertainment districts are set up with counterfeit or "Rogue" drivers in Fed Ex and Ups vehicles.

These drivers can be seen stopping or pausing briefly at each store where a DEBIT/credit card might have been used.

Propaganda on the net leads one to believe they work for the NSA or DHS.

All documents and medical records to prove that our prescription drugs are being swapped by these Rogue Drivers who are supervised by Private Contractors either from Iran, or belonging to the criminal enterprise mentioned above.

Why do we (US) have the responsibility to cover Iran's crisis's while they invest in Afghanistan-KUSH, that is.
