7th June 2013

Dear Sir/Madam,

I became aware of what appears to be gross criminal negligence within the utilities and USA government in 2009. Since 2009 I have become an electromagnetic researcher in my free time and I have published a number of books on the subject that are available through www.amazon.com.

It is clear today that both the utilities and USA government are willfully damaging their mass populations with known biologically harmful electromagnetic radiation emissions into the human environment. Some of these are:

- The use of radiation transmitting Smart/AMR/AMI utility meters that are known to be biologically harmful to a subset of the population. The installation of these onto peoples homes and workplaces are making many people sick today. This sickness is clearly preventable by the simple removal of the meters from the area around the persons home and workplace. Given that the utilities know that they are damaging peoples health with these radiation transmitting meters, they are clearly engaging in negligence and most likely gross criminal negligence. The utilities are willfully inducing Radio Wave Sickness and Electromagnetic Hypersensitivity into many people. The gas utility has installed Smart/AMR/AMI meters throughout my neighborhood and refuses to remove them even though they know that they are making me sick with the pulsed radiation emissions that are throughout my home. I have had to abandon my bed and I now have to sleep on the floor to reduce the biological damaging effects from these radiation emitting devices. A search on the keywords “Smart Meter Sickness” yields many results of people reporting health problems from these known biologically toxic radiation transmitting meters.
- The symptoms that I have observed since the installation of the Southwest Gas Itron 100G high powered pulsed radiation transmitting devices are:
 - January: Fatigue.
 - February: Fatigue, waking up feeling hung over and lethargic.
 - March: Fatigue, waking up feeling hung over and lethargic, fuzzy thinking and concentration problems.
 - April: I abandoned my bed and started to sleep on the concrete floor. I also increased the electromagnetic screening around the transmitting AMR meters. This reduced the severity of the symptoms. This is consistent with symptoms of Radio Wave Sickness.
- The electrical utility Smart/AMR/AMI transmitting meters were clearly damaging the plants near to them, as when they were removed and replaced with non-transmitting analogue meters, the plants started showing vigorous growth that I had not seen in years. They were clearly retarding the plants and causing growth defects.
- The electrification of peoples homes and workplaces through stray voltage. Stray voltage is known to do strange things to biological organisms at above 0.5 volt. The higher the voltage, the more damage it does to the biological organism. It has been known for its damaging effects

to diary farmers, their families and their animals since at least the 1970's. Stray voltage is prevalent in the human environment. Unfortunately, the voltage is low enough not to be sensed by the human but high enough to make the human sick. I have found extensive stray voltage in my street and my tiled floors are electrified, as are my drains. This also includes the toilets that I urinate into. The utility refuses to acknowledge the problems and will not fix it, even though the voltage originates at the utility power equipment. They also refuse to witness and repeat my measurements. This appears to show up in me as sore knees, irritability and fatigue. It is seasonal and matches the peak in stray voltage that appears in homes and workplaces throughout Tucson in the summertime air conditioning season. I no longer urinate into my electrified toilets and I now wear insulated shoes to avoid contact with the stray voltage. This action has caused the health symptoms to subside. Clearly, the utilities have rendered my home into a bio-hazard. In the area of the utility equipment, my garden is showing extensive stress and has done so for years. The use of switched mode power supplies in these Smart/AMR/AMI meters contributes to the frequency content of the stray voltage problems and may cause radio wave emissions from the home wiring which may lead to Radio Wave Sickness in the human.

- People are now reporting curing Autism with electromagnetically shielding the child's bedroom. This is consistent with Autism being an electromagnetic disease and may indeed be easily preventable. The Autism rates have been closely following the rise in cell phone towers and cell phones in the USA over the past decade. Transmitting smart/AMR/AMI utility meters should be expected to increase the Autism rates, as they create a high powered antenna park at the home that is constantly transmitting pulsed radiation for approximately one mile in residential areas. Pulsed radiation is the most biologically harmful form of radiation transmission.
- The refusal by the USA government to acknowledge these problems and to protect their own population. Instead, the USA government is demonstrating what can only be called a form of cannibalism towards its own population. It is supporting the installation of Smart/AMR/AMI meters with massive subsidies to the utilities. It is refusing to enforce the Right to Life laws when people report sickness around these radiation transmitting devices, leaving many people with sickness that is being induced into them by the simple action of living in their own homes that represent their greatest financial investment. This sickness should be expected to eventually lead to premature death and which may be preceded by cancer. It removes the quality of life from a previously healthy and functional person, leaving them with numerous health conditions that were not present before the installation of the biologically harmful radiation transmitting devices in their area. Indeed the World Health Organization lists wireless radiation as a "Possible Carcinogen". One can only wonder why the utilities are installing known "Possibly Carcinogenic" meters onto people's homes in the USA? Long before cancer shows up, the person will generally display the symptoms of Radio Wave Sickness which are listed in order of frequency: 1. Fatigue. 2. Sleep disturbance. 3. Headaches. 4. Feeling of discomfort. 5. Difficulty in concentrating. 6. Depression. 7. Memory loss. 8. Visual disruptions. 9. Irritability. 10. Hearing disruptions. 11. Skin problems. 12. Cardiovascular. 13. Dizziness. 14. Loss of appetite. 15. Movement difficulties 16. Nausea. Source: Symptoms experiences by people in the vicinity of cellular phone base station, Santini 2001, La Presse Medical.
- I have tried to obtain the number of whistle-blower complaints made to OSHA each year and the number of whistle-blower complaints that they actually uphold. OSHA has refused to supply this information. My independent research is indicating that it is below 5% and may actually be very close to 0% of whistle-blower complaints being upheld. It appears to be a

Comments on Notice of Inquiry, ET Docket No. 13-84

similar story at the Federal Communications Commission (FCC) who are supposed to regulate electromagnetic radiation (EMR). It seems that the people who are aware of these gross human health and safety violations have simply had their rights quietly removed by corporate America in an attempt to prevent the protection of the masses, which is currently “Inconvenient”. Indeed, I reported the Southwest Gas Itron 100G radiation transmitting meter to the FCC as causing harmful biological interference and requested them to inform Southwest Gas to remove these devices from the vicinity of my home. The FCC simply ignored section 15 of their rules that gives me this right and the biologically harmful radiation interference meter is still there today. Blatant non-enforcement of FCC rule 15 is clear violation of human rights.

This USA madness must be stopped. The modern human is displaying an apathy in the above areas that is leading to great levels of easily preventable sickness occurring in the current adult generations and retardation appearing in large numbers in the next generation. Indeed, experts in the field of Autism are indicating that at the currently accelerating levels, in fifteen years every USA child will have an Autism diagnosis!

My extensive research into the field of the biologically damaging effects of electromagnetic radiation and its effects on plants and humans is available at the StevenMageeBooks channel on www.youtube.com. My current results are showing that raising the biological levels of electromagnetic radiation causes growth defects to occur. This is exactly what the utilities have done with the deployment of Smart/AMR/AMI radiation transmitting meters. They have turned peoples homes and workplaces into high powered antenna parks! The human environment is no longer natural and this increasing of the radiation environment should be expected to rapidly accelerate human evolution into an electromagnetically hardened animal. Unfortunately, many humans will die after many years of easily preventable illness and disease during this period that we are currently in.

Biological defects also occur when you reduce the radiation levels. Plants grown in electromagnetically screened Faraday cages show strange growth patterns. It is unfortunate that people are now electromagnetically shielding their homes in an effort to avoid biologically harmful radiation exposures from Smart/AMR/AMI utility meters. Even pregnant mothers are electromagnetically shielding their unborn babies with a product called “Belly Armor”! This action may eventually make them sick from radiation deficiency diseases, similar to what astronauts show that live on the International Space Station for many months.

The modern human is in a dilemma: to get sick from living in an unnaturally high radiation environment, or to get sick from a radiation deficient environment. Either way, many humans will eventually get sick!

The modern human is derelict in its duty to the next generation who cannot protect themselves from harm. I hope that you will act in order to protect them. Please feel free to contact me for any further information and my books are a good reference for an in depth analysis of the above points. My book “Toxic Electricity” covers the electrical system in general and my book “Solar Radiation, Global Warming, and Human Disease” covers wireless radiation exposures.

Yours faithfully,

Steven Magee Ceng MIET Beng (Hons)
