

We live in an area that is backwoods, rural and historic, that also has migratory birds, and other wildlife. These areas do not need more towers, but do not low or no cost unlimited, highspeed internet, for use in education, for both children and adults in colleges and universities,etc., and much more is needed for much more full-time telecommuting and working from home,etc. Also, we are being dominated by the satellite industry in TV and internet, and we need more choices, and less expensive, or free services offered, via this areas EPBFI from Chattanooga into our area, but we do not want to trigger off, more incompatible developments, and/or ex/sub/urbanization or more rezoning away from being rural, quiet farming areas, nor do we want to be annexed into metro/municiple areas via Chattanooga/Cleveland/Charleston TN., or via Dalton GA,etc. We need these labor/education needs met, in our area, one of several that do not have the choices other areas, very close in around us have, and that is not fair! It seems we have been redlined and/or annexed out, of more choices via DSL, EBFI and other possible low cost-to free choices in internet, more TV choices(getting only what we want, not having to pay for stuff we do not). We do already have some cell towers (I have also been told that we should be able to access the internet through them on our computers as we do our phones), but we do not need more, of those and/or more towers related to a mega substation that was wrongly placed in our area that needs to be removed permanently and in its place a (NON-TVA) permanently quiet, rural compatible migratory bird and wildlife sanctuary, to promote more eco tourism. Please help in all areas possible! The USDA seems to have provided grants for areas like these, but what will ensure that our gov officials will utilize them in this right wing tri-fecta state gov? Private citizens should not have to fund this themselves or be pressured into allowing more real estate developments/expansions, etc., and/or high density developments, of different kinds of developments, strip malls,etc., in these Intertribal Native American Sacred Council Ground and Civil/Revolutionary War historic areas, which should be kept natural, rural, historic, areas with lots of open lands for recharge/discharge of aquifers for groundwaters carrying waters to replenish other states, and areas rivers,etc. Please help in all areas possible, thank you!
