

Comments on Notice of Inquiry, ET Docket No. 13-84

I am a 59 year old former elementary school teacher. I was disabled in 2003. I experience pain, difficulty walking, memory loss, and neuropathy from being around cell phones, wi-fi, smart phones, etc. I cannot get adequate medical care because maintaining the ability to function and communicate in the high EMF environment of medical settings is problematic. I can no longer work, travel, go to church, it is challenging to socialize and I was homeless for several months all due to the pervasiveness of RF radiation. As a former teacher, I especially hate seeing cell towers at schools. There are lots of epidemiological data regarding ill effects in the proximity of towers. I have been injured by and am currently affected by RF radiation that complies with current exposure limits. I urge you to set more restrictive limits.
