

FRONTIER COMMUNICATIONS CAF PHASE 1 ROUND 2 CENSUS BLOCK CHALLENGES

CHALLENGED PROVIDER: Great American Broadband, Inc. d/b/a/ Onlyinternet.net
(<http://home.onlyinternet.net/index.asp>)

Frontier Communications respectfully challenges the National Broadband Map's depiction that Great American Broadband, Inc. d/b/a/ Onlyinternet.net, can provide at least 3 Mbps download/768 kpbs upload to the Census Blocks listed below serving Uniondale, IN. Frontier's belief, based upon knowledge of the area and the company's own website (below) which lists the greatest possible download speed as 3 Mbps and does not mention an "upload" speed, let alone one of 768 kpbs, is that Onlyinternet.net cannot provide 3 Mbps download/768kbps upload speeds to the census blocks listed below.

Accordingly, because Onlyinternet.net does not offer the requisite broadband speeds, Frontier requests that the FCC designate the blocks listed below as eligible for CAF Phase I incremental funding.

CensusBlock2010	181790402002027	181790402002039	181790402002051

Frequently Asked Question

What is WatchNet?

WatchNet is a high-speed broadband Internet connection brought into your home via line of site, point-to-point microwave link. We use the very latest in technology to provide this service, backed by Watch Communications excellent service!

What does line of site mean?

A line of site is an unobstructed view of our tower with no trees, buildings, etc in the way.

Do I have to have Watch TV in my home to get WatchNet?

No - although you can save money and get the convenience of one bill. You can pick and choose your level service with all of our products!

How does WatchNet connect to our computer?

You must have a 10/100baseT Ethernet Card installed in your computer for the WatchNet equipment to connect to. For a small charge, we can install a network card for you at the time of installation. Most computers purchased within the last 5 years have a network card included.

What are the recommended computer requirements to get WatchNet installed?

Windows 98, 2000, ME, XP, Vista, and 7 will all work with our service. Linux or Macintosh OS/OSX will work a but technical support may be limited. We recommend a computer with a Pentium CPU at 500 MHz or faster comparable Mac CPU), a 10/100 Ethernet card, 128MB RAM. And at least 100MB of free hard drive space you are using an Apple or Linux OS you may be responsible for set up. Your computer will need to have a v browser and email client installed, but no other special software is required.

How fast is WatchNet?

We offer packages with download rates of 768 Kbps, 1024 Kbps, and 1500 Kbps. These packages comparable to average DSL offerings. Many things can affect the actual speed of your internet service beyond the ISP including your computer's performance and configuration, number of users and overall traffic on Internet.

Are upload and download speeds the same?

No - the download speed is measured in 'UP TO' terms and may varies depending on many factors. It stay within 80% of the rated package that you are subscribed to. The upload speed is much less and can be from 64Kbps-256Kbps depending on which package you have chosen.

Do I need an Internet Service Provider (ISP) with WatchNet?

No. We are a full-service Internet provider with e-mail, web space, spam and virus filtering services.

Can I connect more than one computer to my WatchNet?

Yes! You can purchase a network router from Watch Communications. The installer will connect it to your modem during the service installation. You can finish the rest of your network from there and hook up as many computers in your home you as wish for the same monthly cost. If you already own a router, the installer connect it to our cable modem and set up one of your computers to connect through the router.

Is WatchNet secure?

Yes! Our Microwave signal is heavily encrypted, and only our equipment can communicate with our towers. A unlike many other wireless providers, we own the licenses for the frequencies that we use. This gre
