

I am very concerned about the level of radio frequency radiation that I am exposed to every day. I know that there is lots of research out there showing that cells can be damaged from levels far below what the FCC approves of. You must look at the mounting loads of evidence, research, researchers, doctors, scientists, scientific experiments etc. and review the limits. I don't want to be hurt from this stuff and I don't want to be exposed constantly against my will. I thought that these agencies were supposed to protect the people and not protect the big industries. Do your jobs and protect us and stop catering to special interests. I have two younger brothers who are forced to be exposed to wifi in school all day. We should be making decisions on exposure to class 2 b carcinogens---not the government. We should be deciding for ourselves whether we want to put ourselves at risk . YOU SHOULD DEMAND THAT RADIOFREQUENCY RADIATION BE PROVEN SAFE BEFORE EXPOSING THE ENTIRE COUNTY TO IT'S EFFECTS. It should not fall on the American people to show the damage (which the powers that be are ignoring anyway) it should fall on the industry to prove it is safe without exception!!!! . Thank you, Vincent
