

Standards need to be set to take into account non thermal effects for both devices and transmitters. Current standards, which are based only on effects of heating, are orders of magnitude too low.

There are literally thousands of scientific studies demonstrating biological effects from Radio Frequency emissions at the intensities from Smart Meters, WI-FI, Cell Phones, etc. The most comprehensive review easily accessible to the public is found at [www.BioInitiative.org](http://www.BioInitiative.org) . The original report reviewing scientific literature was published in 2007. In 2012, an addendum was published, co-authored by 29 distinguished scientists and doctors from around the world. Attached is a list of the contributors. As you can see, these are highly credentialed and respected individuals holding positions at major hospitals and universities around the world. The 2012 report focused on a review of **1800** scientific studies published since 2007.
