

Simply put, nothing should be added to our environment that adds that much radiation when a perfectly functioning option already exists. Particularly in such massive numbers as smart meters. Not to mention the fact that the info being submitted can be hacked into. I am certain that the same information can be transmitted to the electric companies in safer avenues, i.e. via phone lines. Obviously the better choice for overall community health is to leave the old meters or provide meters that do not increase EMF exposure. And why not just make the decision at the FCC level anyway. Why even ask for community input when you know it's not a safe option? You have all the information you need to make the right choice to protect the people in this country. Isn't that your job? **JUST DENY SMART METERS. THE CURRENT METERS ARE SAFER AND THEY ARE ALREADY INSTALLED AT OUR HOMES.**
