

See The Internet Must Go

http://www.theinternetmustgo.com/?af=demandprogress&utm_source=Net+Neutrality+Goes+on+Trial&utm_campaign=NN+follow-up&utm_medium=email# detailing what ISPs plan is for making the Internet cleaner and faster. If ISPs get their way they would destroy the Open Internet as it exists today and has always existed. Don't let them. Keep fighting Verizon in court and if necessary reclassify broadband under Title II after the ruling. All links are created equal. The Open Internet benefits small businesses and our economy.

By the way money is not speech but it is misused to promote dishonest speech. This affects a number of issues including Net Neutrality. We pay ISPs to move data from point to point (transmit data) and provide us access to the Internet NOT to PRIORITIZE CONNECTIONS and SPEED UP SOME WEBSITES while SLOWING DOWN OTHERS based on a startup's ability to pay a toll. Verizon does not have a free speech right to censor individual's free speech. The issue is whether the FCC has authority to enforce Net Neutrality under Title I which was called into question earlier with Comcast v. FCC.
