

I've been working for about 6 years now with rural school districts in Colorado to deliver high capacity broadband to them. I've enjoyed being able to be part of the solution to provide some of those schools adequate bandwidth however many more have been unable to make the connection, or open up the bottleneck created by their own outdated local area network due to not enough funds available. These school districts need financial help in order to make connections to local providers who have reasonable pricing and high capacity and to upgrade their local area networks.
