Re: Facilitating the Deployment of Text-to-911 and Other Next Generation 911 Applications, PS Docket No. 11-153; Framework for Next Generation 911 Deployment, PS Docket No. 10-255 Verizon Wireless Second Voluntary Text to 911 Quarterly Status Report

Dear Ms. Dortch:

In accordance with the voluntary agreement of December 6, 2012 filed in the above-referenced proceedings and the Commission's procedures for submitting filings after the recent government shutdown,¹ Verizon hereby files its second quarterly report summarizing the status of its deployment of a national Text-to-911 service capability.

Please contact me should you need any further information.

Sincerely,

A handwritten signature in black ink that reads "Nneka Chiazor".

Verizon Wireless
Second Voluntary Text to 911 Quarterly Status Report
October 18, 2013

In accordance with the Voluntary Agreement of December 6, 2012, Verizon Wireless (“Verizon”) hereby provides its second quarterly progress report summarizing the status of Verizon’s deployment of a national Text-to-9-1-1 service capability. Verizon remains on track to make this capability available to capable PSAPs by the May 15, 2014 date set forth in the Voluntary Agreement. As previously described in its first quarterly report three months ago, Verizon plans to offer PSAPs the choice of three Text-to-911 options, two of which are already available, and the third of which is targeted for launch in late 2013. Each of these options also provides a bounce-back message capability. Verizon has and will continue to provide interested PSAPs with information on the various options and the capabilities the PSAPs will need to use these options. To date, some 37 different jurisdictions are using one of the text-to-911 options that Verizon currently offers or supports (up from 11 in July 2013), and several additional deployments are currently scheduled through the remainder of 2013 and early 2014.

Verizon Wireless Text to 911 Solutions

As previously reported, Verizon has selected a Text Control Center (TCC) vendor, Telecommunication Systems, Inc. (TCS), for its deployment of a nationwide Text-to-911 solution. The Verizon Wireless SMS911 National Gateway, first deployed in September 2012, offers PSAPs the choice of three Text-to-911 delivery methods for SMS messages, depending upon the PSAP’s capability. This solution is consistent with the terms of the voluntary agreement and J-STD-110, Joint ATIS/TIA Native SMS to 9-1-1 Requirements and Architecture Specification.

The three 911 text delivery options, and an update on the status of availability of each, are as follows:

- SMS using a Web Browser Client - Using this option, the PSAP logs into SMS911 Gateway (the TCC) to receive and send 911 SMS messages. The PSAP must have public Internet connectivity and web browser capability for its call taker workstations. This solution is currently available to capable PSAPs and to date remains the preferred option for most of them.

- SMS to TTY – Using this option, (i) SMS messages are converted to TTY baudot tones prior to delivery to the PSAP and (ii) return TTY baudot tones are converted to SMS messages for transmission to the end user. Verizon launched the First Office Application (FOA) of this option with the State of Maine in May 2013, with additional early adopter PSAPs launched in July and August 2013. At the request of public safety and disabilities stakeholders Verizon has agreed to support some testing of this capability, but based on

discussions with the PSAPs currently utilizing this option, it is working reliably and to their satisfaction.

- SMS over Direct IP – Using this option, the PSAP installs its own dedicated and redundant IP circuits to SMS911 Gateway. This solution also includes interfacing with i3 PSAPs using SIP MSRP. Verizon Wireless has completed a field trial and is in the process of identifying candidate PSAPs for this option, targeting a FOA launch by the end of 2013.

Note that in Durham, North Carolina and the State of Vermont, where Verizon and Intrado jointly initiated trials of text-to-911 technology, Verizon supports those jurisdictions' continued use of Intrado's text-to-911 solution.

Bounce-back Capability

Verizon affirms that its solution provides a bounce-back (auto-reply) message in accordance with the Voluntary Agreement. The two options that either are generally available or that are now being deployed to initial PSAPs provide a bounce-back message and the third option will provide a bounce-back message once deployed.

Individual Text-to-911 Deployments and Consumer Outreach

A list of the 37 jurisdictions in which Verizon has already deployed text-to-911 as of September 30, 2013 is in Attachment A. Deployment in several other markets is ongoing, with several additional launches currently scheduled through the remainder of 2013 and early 2014.

Verizon continues to work closely with state and local governments in their efforts to inform consumers of the availability and limitations of text-to-911 services. The Vermont E911 Board, for example, in late September launched a text-to-911 public education campaign that Verizon supports. NENA also released guidance to individual PSAPs on text-to-911 deployments, using input from Verizon Wireless and other service providers – <http://www.nena.org/?page=textresources>. And Verizon continues to cooperate with state and local governments' public announcements of new launches to enable them to educate consumers on text-to-911's capabilities and limitations.
