

Amanda Hearn

Ridgely, TN

Continued support from this program helps fund technology in our community that would not otherwise be available. We live in the poorest county in our state, and our students have the opportunity to learn through technology at school via the computer lab, classroom computers, smart boards, etc., in order to be competitive in the the world of technology we live in. Our school would benefit from a mobile iPad lab and that is something I hope to see in the future.
