Re: Followup and Reply to Comments filed by 'MK Hickox' on September 03, 2013 Reassessment of Federal Communications Commission Radiofrequency Exposure Limits and Policies, Proceeding 13-84

To whom it may concern:

Again, thank you for taking followup and replies to public comments and reconsidering the current FCC limits for microwave radiation, aka 'radiofrequency'. Please file this 'Reply to Comment' to two comments: **1) by 'MK Hickox' filed 09/03/2013, and 2) by 'Fred G Mayer' of PPSI filed on 09/19/2013 on Notice of Inquiry, ET Docket No. 13-84.**

Since I have submitted my original comment on September 3, 2013, I have come across several other new papers, articles and studies that need to be included in the FCC's discussion for reconsidering the current existing FCC's RFR transmission standards as stated in Proceeding 13-84.

Please look at the attachments filed with this reply, if one bothers to scratch the surface and begin to look at the studies, papers and many articles already published there is plenty of evidence of harm to prove that exposure to RFR radiation current levels is toxic. For example, for those that have the terrible misfortune of living in an apartment above or next to where all the electrical smartmeter hookups are for that building (let's say more than 3 SmartMeters at a distance of less than 20 feet), that could be a death sentence because see the attached Word document **Oct23-2013-News show exposes leaked Motorola email.doc** states:

Smart Meters emit pulsed microwaves constantly – 24 hours a day, 7 days a week – and that a single Smart Meter, pulsing up to 190,000 times a day, can expose the human body to 800 times as much radiation as a cell phone. And you do not have the ability to switch Smart Meters off. –

See more at: <http://stopsmartmeters.org.uk/rt-exposes-leaked-motorola-email-we-have-sufficiently-war-gamed-the-mobile-phone-dangers-issue/#sthash.QxXGyDds.dpuf>

Imagine one SmartMeter multiplied by say 20 SmartMeter hookups, and if one's bedroom is located within a short distance, something like 20 to 50 feet, one's health will suffer greatly and that person's lifespan will be cut short, no ifs, ands, or buts, about it. Anyone in the wireless industry, wireless carriers and cellphone/telecom/wireless network firms who categorically states over and over and over again that there are no adverse health affects from exposure to RFR/Microwave radiation is simply uneducated at best.

Look at what happens to live human blood after just 2 minutes of exposure to one single SmartMeter standing just one foot away: <http://stopsmartmeters.org.uk/live-blood-analysis-observable-effects-of-rfmw-radiation-from-smart-meter/>

http://www.youtube.com/watch?v=y4JDEspdx58&feature=player_embedded

More than 5,000 studies now show RF/MW radiation to be harmful to human biology, animals and plants. Acute and chronic exposure to RF (radio-frequency) and MW (microwave) radiation can, even at very low power-densities, lead to not only the negative health effects shown in this video, but calcium ion damage in cells, endothelial cell dysfunction, nitric oxide depletion, oxidative stress, melatonin disruption, blood-brain-barrier leakage, DNA damage, sperm damage and more. Glucose metabolism changes within the brain are observable after just minutes of cell phone use. The mechanisms for damage from non-thermal, non-ionising radiation exposure are now becoming clear. - See more at: <http://stopsmartmeters.org.uk/live-blood-analysis-observable-effects-of-rfmw-radiation-from-smart-meter/#sthash.NosAJvyt.dpuf>

As stated in my original comments, please drastically lower the current FCC standards for microwave radiation, aka 'radiofrequency', and do away with the "thermal based" standard. Please issue a moratorium on anymore smartmeter installations. Germany has voted against installing wireless 'smartmeters' and uses a cabled connection. Please use the 'precautionary principle' to protect the public's health: http://en.wikipedia.org/wiki/Precautionary_principle.

I have attached several other items, please review as part of my reply to comment:

- researchers-stumped-by-huge-decline-in-sparrows-Oct-05-2013.doc
- Oct 2013 paper Magda Havas--wireless radiation affects blood, the heart, autonomic nervous system review.pdf
- ES-UK News.Sept.2013-newsletter.pdf
- Papers finding damage to health from Wi-Fi.doc
- Oct23-2013-News show exposes leaked Motorola email.doc

I also support the new FDA Cellphone Citizen's Petition FDA-2013-P-1374 by PPSI, Inc. a non-profit organization based in San Rafael, CA headed up by Fred Mayer whose Cellphone Citizen's Petition and Followup Addendum containing 24 Scientific Items that was submitted to the FDA overwhelmingly show plenty of evidence of harm especially to the most vulnerable, that being pregnant women, babies and children and also showing adverse biological harm to fertility both to women and men because even at low levels, microwave radiation/RFR damages and breaks DNA among other biological effects.

Thank you again for taking public comments, and then allowing for a period of followup replies to comments as well. Please lower standards asap for radiofrequency/microwave radiation. Hundreds of studies have already been done to show that adverse health affects are the result of RFR/microwave radiation exposure; please see the attached Word document: **Papers finding damage to health from Wi-Fi.doc**.

I understand that the wireless industry is extremely important to the US economy, but there are better and safer ways of providing access to the internet (cabled connections) so that we don't suffer so much. As it is, we are killing ourselves (and possibly passing on permanent genetic birth defects onto the next generation) for the sake of wireless convenience, without knowing the tragic health consequences until it's too late. Thank you for your consideration of my comments, replies and attachments and concern.

Regards,

MK Hickox
