This is to SUPPORT the proposed change to remove the symbol rate limitation from digital modes. This change would not alter bandwidth limits or the frequencies available for digital use, so it has no negative impact on any amateur radio operator. This rule change would simply make more efficient use of the available bandwidth, allowing more traffic to pass through the same bandwidth.

Please accept this proposed change so US amateur radio operators can benefit from state-of-the-art digital modes, as other countries already can.

Sincerely,
Gary Holland, N7DHL
