Times have changed since the last rule. I understand that the reasoning was to limit speeds to control how much bandwidth was consumed. As Pactor4 is capable of using the same bandwidth of current approved digital modes please remove the character limit and permit bandwidth efficient modes regardless of character speed. The key is how broad the band use is and Pactor is the same as SSB and other modes.

The continued engineering advances that come from amateur radio experimentation are based upon rules that encourage, rather than discourage, such efforts.

I appreciate your attention to this matter and look forward to assisting in the development of further advances in radio communications
