

7520961510.txt

Amateur Radio is all about experimenting with the "state of the art" in communications technology. How can you limit this technology by imposing a standard that was written year ago and probably made since at that time. With compression technology changing on almost a daily basis it is now possible to pass even more data at a faster rate in ever decreasing bandwidths.

Please reconsider changing the "symbol rate" language as it now is written to consider the increase in technology.

A Concerned Amateur Radio Operator.
