After careful consideration & discussions with other amateur operators, I would like to ask that you NOT approve this resolution. Potential Factor 4 operators seem to be the only ones who would benefit. Narrow band modes such as PSK-31 and CW would be overrun by wide-band digital signals. I am both a CW operator and a Factor 3 operator. I would be very unhappy to see these two modes share the same frequency space. I have observed that the digital operators often do a less good job of listening for users on the band before they commence. I have nothing against Factor 4, but it should stay in the parts of the bands previously allocated for such wideband signals.
