

7520961633.txt

It is about time we took another leap into the future and remove the obsolete symbol rate limitations on certain amateur radio digital modes to allow a more efficient use of the Ham bands. I support the removal of the symbol rate restriction on Amateur radio digital signaling.

Modern commercial off the shelf DSP processors and evolving waveform technologies are allowing us to achieve much higher symbol rates, with error correction, without infringing on bandwidth or spectrum. Pactor FOUR for example is such a mode.

Please accept the proposed rule change and allow US hams to benefit from modern digital modes being used regularly in virtually all other countries.

Sincerely  
Robert Felt
