I strongly support modifying 97.305(c) and 97.307(f) as proposed by the ARRL. The current symbol rate restrictions are inconsistent with the Basis and Purpose of the Amateur Radio service. Simple bandwidth restrictions are more flexible.

In addition to allowing more flexible transmission of digital data in the Amateur Radio Service, I would support allowing mixed digital voice and data transmissions in the HF band segments where voice but not data are currently allowed. Some information is faster to handle as voice while other information lends itself to text.
