#### Satellite Phones

Satellite Communications/phones from DTS/Planet Satellite have been and are essential for rural and remote areas. Some of the counties we operate in, have limited and poor cell phone reception. We are required to always have communication access available, because our employees work alone and handle Hazardous Material. The satellite phones, help our productivity and insure safety issues can be taken care of. A recent ice storm in January this year, we had an employee stranded in Terrell Co. He slid off the road and was partially blocking the road with his trailer. Conoco/Phillips did not have any employees working in the area that day. The satellite phone was our only means of communication. My driver was able to contact me and we were able to get the incident handled. Without the satellite phones, it could have taken longer for me to be notified.

Thanks  
Paul Jenkins
