

## **COMMENTS TO FCC**

2-3-14

I am a physician who treats people who are hypersensitive to electromagnetic fields. I live and practice in Tucson, AZ.

Currently, the city of Tucson has a policy to preferentially locate new cell towers in commercial areas rather than in residential areas. I believe that policy is beneficial to residents of Tucson because it keeps the highest radio frequency transmission levels out of areas where people spend most of their time.

I urge the FCC to maintain the right of municipalities to set their own standards for the placement of cell towers and radio frequency emitting arrays in their areas.
