

Reclassify The Internet As A Common Carrier.

On January 14, 2014, the United States Court of Appeals for the District of Columbia Circuit struck down the FCC's Open Internet rules on a technicality, that the internet was not classified as a common carrier by the FCC. This threatens the whole future of net neutrality, and would allow big telecom companies to discriminate in how they carry internet traffic.

But all the FCC simply needs to do is correct this classification oversight, entirely within their own administrative power, and reclassify the internet as a common carrier, which all common sense says that it is.
