Rural Broadband Experiment Expression of Interest

Premier Systems Unlimited Inc. wishes to express interest in this program, we are a WISP with a medium footprint in Yuma and Washington Counties in the state of Colorado.

According to the census tracks listed this is our current service area, and we are looking to expand our ability to service the more remote customers of Yuma County, CO and Washington County Colorado.

What we are proposing is 6 new 200' tower sites, initially fed via fiber from the Eagle-Net program here in Colorado, then licensed and unlicensed radios between towers and customer sites.

These customers will be able to choose a base service package of 4Mbps / 1.5Mbps up to our current serviced "premium" package of 14Mbps / 3Mbps.

An initial cost for the build of these new tower plus equipment is estimated to be roughly \$1,000,000. Based on a structure cost of roughly \$125,000 per tower and then radio and fiber hardware.

Thank you
Premier Systems Unlimited
Yuma, CO
