Re: WT 14-17; Cricket 700 MHz wireless license

Dear Federal Communications Commissioners,

Airwave space is invaluable these days, and we need to allocate it wisely. Mobile broadband services are used for both crucial business activities and for entertainment purposes. No matter the use, individuals need to be able to count on reliable coverage and fast download speeds. Leap Communications thinks it would be helpful to allow mobile broadband use on quality spectrum that is owned by its subsidiary, Cricket Communications. I agree with Leap because it is for the greater good of the entire Chicago region.

We use android-based applications for our wireless needs here at Patriot Range Technology, where we design firing ranges. I can try to work around slow or bad mobile service, but it certainly is an inconvenience. Broadband coverage is also an important part of my staying in touch with family every day while I'm working

Mobile device usage is expected to skyrocket in the coming years. There are already many areas with bad wireless broadband reception, so we really need the quality spectrum such as Cricket's on the lower end of the 700 MHz band. This spectrum is well suited for mobile devices, and the market is taking us in the direction of expanded mobile services. Please grant Leap's request to allow Cricket's prime space to be used for mobile broadband purposes. Thank you for accepting my public comment on this crucial issue.

Sincerely,

Tom Corcoran
Owner
