

I wish to comment on RM-11715 as both a US citizen and as a licensed amateur radio operator (KJ6WUW).

I fully support the band plan as proposed by Mimosa. The under-utilized 10 GHz band can support both continued amateur operations and wireless broadband with the channelization scheme described. Additionally, commercial operations in this band will indirectly assist further amateur operations by both increasing the supply and lowering the cost of suitable equipment.

However, I do not support free commercial exploitation of limited spectrum simply because Mimosa proposed a new band plan. If there is commercial viability in this band, then the businesses involved should compensate the nation for their use of our limited RF spectrum. The best way to determine the value of this band is to hold an auction.

Thank you for the opportunity to comment on this exciting proposal.
