To the Commission... No. Do not grant the petition. The petition contemplates operations which, if permitted, would interfere with military node centers using SHF, amateur radio operations, amateur satellite operations, radar, and security motion sensors; of course, these uses of this spectrum might just as easily overwhelm the operations contemplated in the petition. For these reasons and those readily apparent and too obvious to spell out here, I respectfully urge the Commission's denial of the petition. Respectfully, /s./ James E. Whedbee
