AFFIDAVIT OF David Morrison

State of Oregon]

_Multnomah_____ County]

I, _David Morrison_, attest that my statements are true to the best of my knowledge.

Comment round for FCC GN Docket No. 12-353 and GN Docket No. 13-5.

1. My name is _David Morrison . My address is __5546 SE Taylor Portland OR 97215__.

2. I am Bookseller.

3. The United States once had a government that was elected by the people in the country and as such enacted laws and worked on behalf of it's citizens. Currently there is no government, there are no representatives of the people in Congress. There are only corporate slaves, collecting their campaign donations from their masters and dutifully acting on behalf of the corporations with no interest in human life, personal sanctity, the right to choice or a healthy environment. Perhaps the most egregious and lawless example of the current corporate fascist state can be found in the collusion between "government" and the telecommunications industry.

Current FCC Standards are based on fraud, corruption, racketeering, bribery, suppression of science, military and industry pressure. A full history of how we came to the current irrelevant and corrupt standards can be found in this superbly documented history by Don Maisch entitled the Procustean Approach:

<http://www.wirelesswatchblog.org/true-crime/>

Within the current corporate fascist state we are faced with a potential crime against humanity because of this collusion between government and industry that leaves many with no choice but to abandon telecommunications services all together because of the physical harm they experience from exposure to wireless technology. The proposal to abandon wired connections for telephones and the internet will leave many people without service and without the ability to conduct everyday transactions. The proposal to abandon wired connections in favor of wireless connections ignores the enormous body of science spanning over 60 years that confirms "irrefutably" (American Academy of Environmental Medicine)

that grave harm may come from the use of wireless technology. Dr. Neal Cherry's concise statement is a microcosm of current science: **“Electromagnetic fields and radiation damage DNA and enhance cell death rates and therefore they are a Ubiquitous Universal Genotoxic Carcinogen that enhances the rates of Cancer, Cardiac, Reproductive and Neurological disease and mortality in human populations. Therefore there is no safe threshold level. The only safe exposure level is zero, a position confirmed by dose-response trends in epidemiological studies..”**

The United States Military conducted thousands of studies on the biological effects of microwave radiation. Here is one declassified document: http://smartmeterskill.com/wp-content/uploads/2011/08/Bioeffects_of_Selected_Non-Lethal_Weapons.pdf

Not coincidentally it has been found, in a study by Dr. Henry Lai of the University of Washington, that industry funded studies find no harm in 65% of their studies while the reverse is true for independently funded studies. There is no coincidence that currently there are no ongoing studies of the effects of pulsed microwave radiation in the United States however there are many throughout the rest of the world—mostly in Europe where Dr. Lennart Hardell in Sweden found that the potential for brain cancer in people under 20 years old is 500% higher for users of cell phones than non users. In Oct. 2012 The Italian Supreme Court ruled that Cell Phones DO cause Brain Cancer:

<http://microwavenews.com/news-center/italian-supreme-court-affirms-tumor-risk>

There is far too much science to list in a comment however many studies confirming the grave harm that cell phones and wireless technology can cause can be found at this site:

<http://www.wirelesswatchblog.org/science/>

How is it possible that an industry that cannot even get liability insurance

<http://www.businessinsurance.com/article/20070603/ISSUE03/100022051> can be

considered as an alternative to safe, wired telephone connections. The “government” is putting it's revenue at risk as the liability will fall on them. When the law suits begin, as with the tobacco industry, pension funds will disappear as the telecom stocks fall, and our

“government” will have to cover the liability law suits as the telecommunications industry is not only protected by the telecommunications act of 1996 but can not get liability insurance so the health care costs will be shouldered by the “U.S. Government.”

In Sept. 2013 The American Association of Justice (formerly the Association of Trial Lawyers of America) wrote a letter to the FCC:

<http://apps.fcc.gov/ecfs/document/view?id=7520942173> that said: “The FCC must perform due diligence in setting standards for exposure to radiofrequency radiation” and within that letter harshly criticized the FCC for it’s recategorization of the ear as an “extremity” therefore providing enough distance from the head so as to circumvent it’s own exposure standard. In other words, the ear is not considered a vital organ so it can be exposed to higher radiation than the FCC allows for other parts of the body.

The letter from the AAJ is essentially a warning that the next wave of litigation will be coming soon and will be against the telecommunications industry and what is left of our “government.”

The reason for the proposal to replace land lines with wireless technology is greed, corruption, surveillance, control and convenience. It benefits only industry, whom in the end, will be the losers when they wind up in court like the tobacco industry for their genocidal sociopathic greed. How many millions of people will get brain cancer due to this proposed action should it come to fruition? Human life is never a consideration when more money is to be made. **THIS IS A MICROCOSM OF WHAT AMERICA HAS BECOME. A LAWLESS UNCARING GREEDY SOCIOPATHIC PLAYGROUND FOR THE ELITES WHO OWN OUR GOVERNMENT.**

Ignored by the FCC and by industry is the fact that the World Health Organization classified RF from cellular telephones and wireless technology as a Class 2B Possible Carcinogen. There were many on the panel that wanted it to be categorized as a Class 1A probable carcinogen. With less land lines, comes more cell phones, more revenue for the telecoms and more tax revenue for the “government.” That tax revenue will be needed to pay for all of the liability law suits that will fall into the “governement’s” lap. More cell phones, more cell

towers. Dr. Martin Pall & Dr. Paul Dart address the epidemiology of proximity to cell towers, wi fi in schools and cancer as well as other physical and psychological problems:

<https://www.youtube.com/watch?v=E-nYxZHak6I>

TO summarize; it is not a good idea to replace land line cabled telephones with wireless cellular telephones. Please see: Cellular Telephone Russian Roulette by Dr. Robert Kane. Kane was a telecom employee who died of a brain tumor, published this book and all copies were purchased by the telecom industry and never reached the public. Here is the pdf:

<http://www.wirelesswatchblog.org/cellular-telephone-russian-roulette/>

Quotes from the Book:

“...energy stored in the near-zone fields close to the antenna, the industry never speaks of because very few, except antenna engineers and electromagnetics researchers, are aware of its existence. Under some circumstances the stored energy is 10 to 100 times greater than the radiated energy. It depends to a great extent on the configuration of the antenna. Knowledge that this great amount of stored energy may be “efficiently” coupled into the head and brain of a user should be enough to keep all but the most daring from using portable cellular telephones.”

“Consider again that the industry’s own research findings during the 1970s proved that there was excessive exposure to users of portable transmitting devices, so the manufacturers decided to throw out the laws of physics. They exempted themselves from the laws of the universe in order to continue to market their products to the unsuspecting public.”

“the researchers employed a simplistic homogeneous mold of “muscle tissue equivalent” comprised of salt-water and plastic powders.”

“T. Kobayashi has warned that typical gel-type materials are prone to dehydration, deterioration and invasion by molds and bacteria. All of these effects lead to inaccurate experimental data, yet nearly all researchers who experiment with laboratory models use the gel mixtures.”

“Many of the conclusions drawn by these researchers are extrapolations based on results obtained from studies of unrealistic models and plastic dolls”

“Rather than provide the realistic models for the researchers, industry has elected to use the public for its experiments.”

“They, the intellects who seek escape from moral values, they are the damned on this earth, theirs is the guilt beyond forgiveness. —

A. Rand Atlas Shrugged”
