I am in support of the Mimosa proposal. As a WISP that serves rural areas, we are in much need of getting sufficient backhaul to the rural communities. This is our biggest hurdle on providing that service to those rural areas. Although the 3.65 and 5.8 ghz bands do offer some help, the use of the 10 ghz band would help solve getting those sufficient amounts of that needed bandwidth.

This IS in the public interest, and will not cost the Government or the Taxpayer anything to provide this needed step into bringing more broadband to rural America !
