As a manufacture of RF devices for Military, Commercial, and Amateur Radio in the frequency allocation specified in the Mimoso Petition, in our opinion, we find many non achievable technical aspects and feel that the Mimoso Petition is not a well-conceived plan but a conglomeration of poor engineering and political jargon to give the appearance that they did their homework and can produce as stated. Their reasoning and justifications are not backed up by the technology of today or in the near future. To allow this Petition as presented would do nothing but create havoc to those that utilize the 10.0 to 10.5 GHz frequency range now. There are many more detailed aspects of the petition that are flawed for various reasons but for simplicity, because to the reasons stated above, we ask that Mimoso's petition be denied as submitted.
