I new cancelling analog tech vs. digital would be a bad idea and I was not surprised with consumer loses as follows:

1. limited capability to record and save media paid for through subscriptions to the cable company.
2. loss of entertainment time thru commercials, over 8 hours per day is lost for TV we pay for.
3. rise in cost of service due to upgrade to digital
4. lack of privacy due to specific spying thru two way media
5. lack of free choice due to requirement to buy cable service due to very poor free reception because of microwave interference.

forced to pay for repeat entertainment, day after day, month after month, and year after year, paid for over and over by consumers as well as commercials without FCC fair play protections. After all we did not have a vote in cancelling analog, the FCC and government did. And we demand you do your American duty and give us better digital entertainment and protection from spying. I can only speak to Cox Cable network, but I'm sure it's consistent within the other networks.
