Unintended consequences of regulation are the most risky part of our country's broadband policies. In the end our broadband speeds are far behind OECD averages and we really have two choices:

- 1) No more all-you-can-eat unlimited Internet.
 - * They are not really all-you-can-eat (deceptive)
 - * Free-open Internet for the first 5Gb (for everyone)
 - * After 5Gb certain content does not count toward limit (sponsored by Amazon or X provider)
 - * You can pay for different plans that have certain content unrestricted (like the HBO+Netflix plan)
- 2) free competition for the last mile (carriers have to open their network for access to homes)

These are simple win-win solutions. Carriers need to be able to make investments to increase speed and they should be allowed to have a differentiated product so that consumers can pay for the service they want.
