I am worried about the direction net neutrality is currently heading in this country. Internet service providers (ISP) already have an oligopoly on the market and have artificially made access to the internet on the consumer end much more expensive than it should be. Now, internet service providers will be able to charge extra to content providers in order for those content providers to have better access to their customer base. This will physically slow down the growth and innovation of our technology sector and will limit the access smaller content providers have to the market based on finances. That is absolutely ridiculous that current ISP have that kind of power. Since the cost of starting up an ISP is extremely high and major ISP already control the market, there needs to be policy to either break up their oligopoly or prevent them from having artificially high prices. Please consider making or supporting policy that will keep the internet accessible (which includes affordable) to all United States citizens and keep the U.S. at the leading edge of technological innovation.
