

7521105735.txt

I want to express my opposition to RM-11715. I believe that the plan put forth by Mimosa over estimates their ability to deliver what they have proposed as well as under estimates the deleterious effects their plan would have on the amateur radio service. They have under estimated the utilization of the 10 GHz band in both the number of users as well as to the type of communications that take place. To that end, I agree with and support the detailed scientific comments provided by The Northern Lights Radio Society (Posted 4/7/2014, 7521097011.txt), by the ARRL and many other RF Scientists that have commented on RM-11715.

Respectful ly,  
Richard Burgett
