Broadband internet should be reclassified as a Title II Common Carrier Telecommunications Service.

If it's not, that means Big Data will be prioritized over smaller websites, thus making it a less entrepreneurial and democratic place. The internet is a global platform where really anyone can reach out to potential audiences around the world. We should work to preserve that feature of the internet. If we don't keep net neutrality, the internet will become a lifeless entertainment platform, just like the four hundred channels of late night cable nobody watches.
