It is necessary to classify Internet Service Providers as Title II Common Carriers. There exists the very real possibility for abuse that will stifle the future economic wellbeing of the United States, stifle innovation, and limit the freedom of consumers to choose the content they desire.

Categorizing remote delivery services as telecommunications services is consistent with the guidelines set by both Congress and the DC Circuit Court of Appeals, and would give the FCC ample ability to adopt and enforce meaningful net neutrality. With clear authority and effective rules, ISPs would be prevented from blocking or discriminating against any edge provider, whether on a wireline or wireless network.
