As Internet Service Providers continue to demonstrate they wish to carry data in tiered channels which violate if not the letter then at least the intent of their current and previous FCC status, it becomes necessary to treat them as a Common Carrier in the same manner that telecom companies are handled. To continue to support an Open Internet and lead the world in technology our businesses need to be able to compete on equal ground as any other business. Classifying ISPs as common carriers helps ensure both of these goals are achieved as they were set forth by the current administration and as they were reaffirmed by the people of the United States in recent elections.
