Please reclassify broadband internet as a title II common carrier telecommunications service, so that we can have equal treatment of all Internet data, rather than preferential treatment for large companies that can afford to pay for it. Small start-up companies will be squeezed out of the market by the large companies, and it will cost consumers more to access independent content, thus stifling innovation and creativity. I want to be able to choose the content I want to watch, rather than being told by my ISP that they would prefer that I watch content from their partners.
