As a highly concerned citizen commonly working with small businesses and start up companies technical requirements, I have to ask that broadband internet be classified as a title II telecommunications service.

I am aware of the benefits that data discrimination will allow for, but they all come with a very high risk for the end user. It is important to realize that those end users aren't just using the internet for entertainment, but for content generation, research, and most importantly, for business. To allow data discrimination is to allow an expanding gap between small and large business, and create an even larger barrier to entry than we are already struggling with.

Please, classify broadband Internet as a title II telecommunication service, so we can find a way to provide the benefits ISPs are looking for, without the expenses of the citizens and companies which rely on their services.

Thank you,  
Zac Jennings
