Broadband internet needs to be classified as a telecommunications service, NOT the same as TV or radio. The internet has never been the same as TV or radio. It's not passive. It's dynamic. It should be a level playing field for ALL content, not just the content the providers want spoon fed to its customers, or that they get PAID to spoon feed to its customers.
It's encouraging monopolistic business practices, and the last time I checked, monopolies were bad for everyone.
