\f0\fs24 \cf0 Over the past 10 years, the internet has become a necessity in the United States. We do everything online. Completing forms, doing taxes, banking, bills, stay informed, weather reports, watch/listen to our entertainment, find and apply for work, and business/personal communication just to name a few. \

\ Broadband in the United States has become and necessity and utility. It will continue to be that way. We need protection from the FCC on this. Private companies shouldn't have the ability to discriminate when it comes to internet traffic from any other business. ISPs must be classified as common carriers because a lot of areas in this country don't have the freedom to transfer to another provider because only 1 exists in their area. }
