The internet will not stand for a "Cable TV" internet. I dont want a fast lane because that makes internet more expensive for us. Many people want the internet to be reclassified as a title II common carrier telecommunications service. Also, while your at it, pressure Comcast and other monopolies to stop with their lobbying and allow for competition. Internet here is very expensive and for what we get, it is terrible. People in other countries pay less for more. Only when there is competition will the internet improve.
