As both a 28 year old internet user and the a small business owner in the Health Care Industry (Health Solutions Plus Inc.). I am extremely concerned at these Internet Carriers being able to control the speed of the internet base on the site your visiting vs the the plan you are paying for. I honestly believe the best course of action for the FCC is to make ISPs Common Carriers otherwise they will use their enormous power as sanctioned monopolies to squeeze out every dime from the people of our United States. We already have one of the worst internet service for the highest price of the developed world. Lets strive to make it better not worse.
