

## **Comment on ET Docket No. 13-84**

The National Cancer Institute and National Institute of Environmental Health Sciences, components of the U.S. National Institutes of Health, have reviewed the Notice of Inquiry (Docket No. 13-84) published by the Federal Communications Commission. We understand it to mean that FCC intends to determine if sufficient new information has emerged since 1996 to warrant a change in the exposure limits for radiofrequency electromagnetic fields issued by the FCC. The NCI and NIEHS appreciate the FCC's interest in continuing to work closely with NIH and other federal agencies with expertise in public health for guidance and expertise on this matter.
