Do NOT approve this merger! It is most definitely not in the best interest of the country, consumers, and small business's! Comcast will not and has not, despite what they say, increased investment in broadband. They have not and will not increase broadband speeds despite the high margins they make selling it. And they will still continue to limit how fast consumers can access streaming video sites to extract payments out of them. I implore the commission to see through Comcast's lame charade that they are putting on and reject this merger!
