Dear FCC,

I'm Dale Quiigg and I live in Bothell, WA.

Net neutrality, the principle that Internet service providers (ISPs) should treat all data that travels over their networks equally, is important to me because without it ISP's will have the power and ability to degrade or hamper competitor's products.

A pay-to-play Internet worries me because ISPs face only marginal competition such that users can not "vote with their wallet".

Since the FCC seems unwilling to address real competition in the ISP space to consumers, you sure as hell better ensure that ISPs at least have to "match the pipes" on the back-end so that any internet company can meet the bandwidth requirements of their customers. I feel the Mozilla foundation's call for "the FCC to designate last-mile delivery of edge provider communications as "remote delivery" services, and as telecommunications services under Title II of the Communications Act" is the best solution I've seen for this issue.
